

Information Systems Security

Exercise Set 8

1. Create a simple web application deployed in the cloud environment. Choose 3 items from the below list and using cloud platform capabilities apply protection in the selected areas:

- Authentication based on external service (Google, Azure B2C, etc.).
- Role based access control.
- Regular backups of the application.
- Integrate with VNet.
more: <https://docs.microsoft.com/en-US/azure/app-service/web-sites-integrate-with-vnet>
- Application monitoring.
